**Sr. Mine Geologist  
Technical Services/MRM  
Closing Date: March 19, 2010**

**Posting #: 2010-040**

Reporting to the Chief Geologist and working a two (2) weeks in / two (2) weeks out rotation at the Snap Lake Mine site, this position will be responsible for leading the underground geology team to ensure that strict grade control guidelines are met.

Responsibilities include:

- Coordinating and supervising a team of underground geologists performing activities related to grade and dilution control, geological mapping and specialized underground projects, interpreting and compiling geological and structural information, interpreting the ore body for integration into the geological model, and management of bulk sample and other sampling programs for input into resource models;
- Delivering reliable and timely information to mine planners;
- Maintaining strong communications with the mining department; and
- Displaying a strong aptitude for continuous improvement by keeping up to date with technological advances.

Requirements:

- Degree in Geology with a minimum of five (5) to seven (7) years of underground geology experience with a thorough knowledge of regulations and mining practices.
- The ability to lead and motivate a dynamic team of geologists will be integral to the success of this position.
- Strong computer skills are essential including previous experience with Gemcom or other modelling software. AutoCAD and MS SQL would be an asset.
- The ideal candidate will understand and be able to meet the unique challenges and opportunities of working on a remote mine site in the north.
